"An organized and well-designed classroom enables the teacher to observe, support, and meet the learning needs of each child" (FOUNTAS & PINNELL, 1996, P. 43).

This checklist (FIGURE 2.3) is designed to help you evaluate your classroom's physical environment—how the space and materials are organized. Enter a minus, check, or plus mark for each item as it pertains to your classroom.

Not at all descriptive of my classroom	Somewhat descriptive of my classroom	Very descriptive of my classroom		
_	✓	+		
There are well-defined	ed areas for large, small, and independent work.			
The classroom library i there are several comf	ks are displayed attractively, and read.			
Books are easy to find	Books are easy to find and return.			
Books are integrated in	Books are integrated into the work centers.			
There are numerous di	There are numerous displays of written language at eye level.			
Management tools, such as a work board, helper's chart, and class rules, are loc easy view.				
Pocket charts are used in several locations.				
Materials are organized	Materials are organized for easy access and return.			
Materials are clearly la	Materials are clearly labeled. Simple written directions are provided as needed.			
Furniture and dividers are arranged so that the teacher has a full view of		nas a full view of the classroom.		
There are comfortable and well-supplied areas for independent reading and				
Noisy and quiet areas	are separated.			
There are neat, usable	ole places to store, remove, and replace student work.			
There are poems, char to read.	There are poems, charts, big books, and other print materials readily available for stud- to read.

content literacy. Portsmouth, NH: Heinemann.

# SECTION II: Organizing and Managing the Classroom Environment **Managing and Moving Groups**

"In a differentiated classroom, the teacher uses many different group configurations over time, and students experience many different working groups and arrangements"

(TOMLINSON, 2001, P. 3).

isplay the work board prominently so students can find their names and follow the routine listed for their group (FIGURE 2.5).

Each student goes to the first center on the list and selects a task from that center. Students are encouraged to help the others in their group, talk quietly, and work cooperatively.

When the first task is completed, the student looks at the work board to determine which activity is next. In this way, students are able to work independently until they are called for small-group instruction with the teacher or until work time is over.

You can find an in-depth discussion of rotation systems and self-selected centers in Section III, Literacy Centers for Reading and Writing.

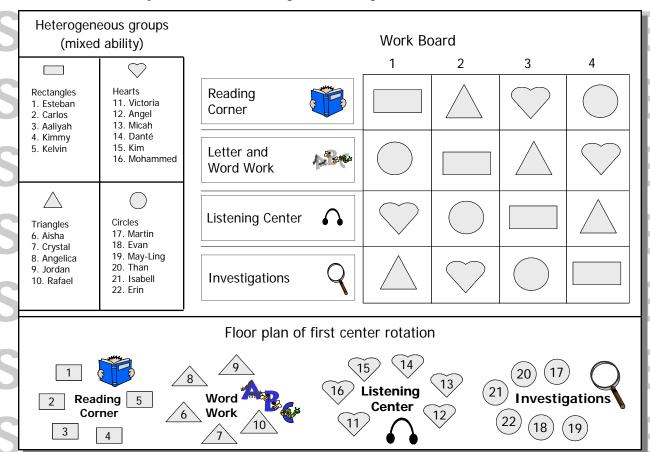

FIGURE 2.5

"Flexible grouping is a partial answer to the question of what to put in the place of whole-class or ability groups"

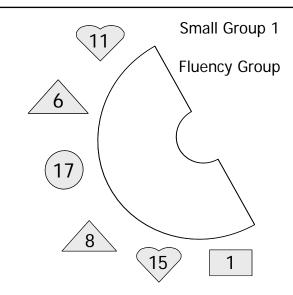

(REUTZEL, 1999, P. 276).

V hile the other students are working in their mixed-ability groups, you work with students who have similar needs in small instructional reading groups (FIGURE 2.6).

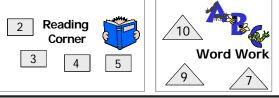

Call together a group of students who need to work on fluency: Esteban, Aisha, Victoria, Martin, Angelica, and Kim. After you remind them of a fluency strategy introduced in an earlier mini-lesson (how to chunk words together to read phrases), the students begin reading a familiar text, working on reading smoothly and with expression. You move around the group, listening to individual students read and offering support as needed.

After the students read out loud, have them work on a word-building activity using words from the text they just read. Provide explicit instruction followed by guided practice so you can give immediate feedback as needed. The students continue to work on this activity when they go to the Word Work center, where they will use these words in sentences.

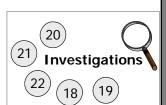

Floor plan, first rotation, minus the students in same-ability group with the teacher

"Many teachers start centers without a clear management system. Don't." (Nations & Alonso, 2001, p. 13).

In Figure 3.3, you see an example of a different type of rotation system. In this example, the students progress through the centers in an assigned order and at an assigned rate. This prevents overcrowding in any particular center and it guarantees that students will participate in every center on the work board.

For example, students in the Rectangle Group begin in the Reading Corner. When the teacher gives the signal, the group moves to the Word Work Center to work with letters and words. Upon the teacher's signal, the group goes to the Listening Center to work on fluency through repeated reading of instructional level text. Finally, the group moves to the Investigations Center, where they read and write about science and social studies topics.

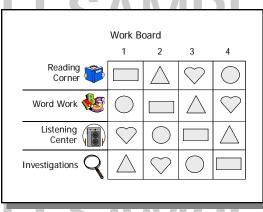

FIGURE 3.3

FIGURE 3.4 shows another variation of the work board, but instead of rotating as a group, the students move from center to center as they complete their work. The groups start together but do not necessarily stay together because different students will finish at different rates.

The free choice icon signals an opportunity for students to self-select a center. Having a free choice helps students develop decision-making skills and responsibility for their choices. In this example, students' free choices are the Writing Center, the Overhead Projector Center, and the Technology Center.

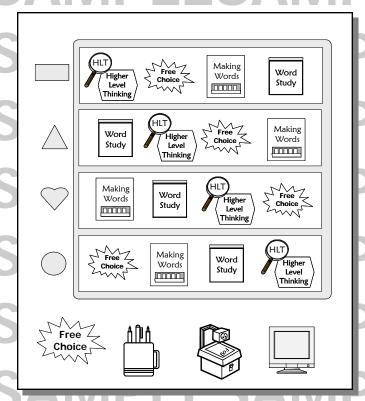

FIGURE 3.4

"Simply showing something once isn't enough for most learners, even adult learners" (DILLER, 2003, P. 6).

omplete the following form (FIGURE 3.15) to evaluate your instructional practices each time you introduce students to a new center or center activity.

Objective	How will I state my expectations?	
Activity Description	Have students completed a similar activity?	
Materials	What are the materials for this center/ activity? How are they organized?	
Explicit Instruction	Will I introduce the center/activity to a whole group or a small group?	
	What is the purpose of the center/ activity?	
	What are the rules and procedures for this center/activity?	
Teacher Modeling	How will I model the activity?	
Guided Practice	Will I give my students a chance to try the activity before I expect them to do it independently?	
	Did I sufficiently model the activity?	
	How will I be sure the students understand what they are supposed to do?	
Independent Practice	Did I teach the skill more than once before I asked students to work independently?	
	How will I monitor the activity?	
Monitor Progress	How will I determine whether the student learned the concept or mastered the skill?	
	How will I adjust my instruction accordingly?	

"The number of possible literacy centers is limited only by your imagination" (Schulman & Payne, 2000, p. 70).

here are a number of books filled with suggestions for organizing and implementing literacy centers. Many of these books are listed in the reference section at the end of this manual. Your job as the professional is to discern the value of the suggested educational experience and determine its worth to your students.

Use this checklist (FIGURE 3.16) to evaluate the processes, procedures, structure, and activities in your literacy centers. Enter a minus, check, or plus mark for each item as it pertains to each center in your classroom.

Not at all descriptive of the center	Somewhat descriptive of the center	Very descriptive of the center	
<u> </u>	✓	+	
Evaluate the Process			
The center is designed so that	at students can manage and comple	te the work independently.	
The activities emphasize app	lication of previously-taught skills ra	ther than teaching new skills.	
The activities are open-ended multiple possible outcomes.	d. There are multiple entry points, I	multiple paths to solutions, and	
	acy goals I set for my students. The ach center and for each activity.	e link to my reading and langu	
The center provides an oppor	rtunity for my students to read, writ	e, listen, and/or speak.	
Evaluate the Procedures			
Students know what to do wl	nen they need supplies or materials	•	
Students know what to do wi	th completed products.		
Students know how to use th	Students know how to use the center and my expectations for their learning.		
Students know how to clean	Students know how to clean up and reorganize the center for the next students.		
Students know how to work	without disturbing others.		
Students know how to make	the transition between activities.

FIGURE 3.16

"It is through the use of a variety of grouping strategies that teachers address students' needs, skills, and motivations in learning literacy"

(REUTZEL, 1999, P. 273).

# Grouping strategy: Whole group (mixed ability)

Group composition: Entire class, heterogeneous group

### Instructional focus

- Introduce new ideas, concepts, vocabulary
- Review recently taught skills and strategies
- Provide modeling through read alouds
- Develop cross-curricular themes
- Discuss shared experience
- Model and demonstrate the writing process

### Activities

- Read alouds
- Shared reading (big books, charts)
- Shared writing
- · Author's Chair
- Performances
- Word Wall activities

# Grouping strategy: Small groups (mixed ability)

Group composition: Small, heterogeneous groups of two to five students

Group assignment: Teacher assigns students to groups or students select their own group, depending on the task objective.

### Instructional focus

- Academic achievement
- Social development

### Activities

- Literature circles (book clubs)
- Interest groups
- Partner reading
- Group retellings
- Jigsaw (each group completes a portion of a class project)
- Readers Theater
- Project groups

# Grouping strategy: Flexible small groups (same ability)

Group composition: Homogeneous group of three to six students.

Group assignment: Teacher varies group membership based on individual student needs.

### Instructional focus

- Guided reading instruction targeted to students' specific needs
- Activities that allow students to practice and extend what they are learning
- Performance tasks

### **Grouping strategy: Student pairs**

Group composition: Groups of two students

Group assignment: Teacher assigns student pairs or students select their own partners, depending on the task objective.

### Instructional focus

- Reading fluency
- Peer tutoring

### **Activities**

 Students each have copies of the text and take turns reading and rereading

Grouping strategy: One-to-one

Group composition: Teacher and student

### Instructional focus

Instruction targeted to student's needs

### Activities

- Teacher-student conference
- Writing conference
- Portfolio conference
- Progress monitoring

"Comprehension is the reason for reading. If readers can read the words but do not understand what they are reading, they are not really reading"

(NATIONAL INSTITUTE FOR LITERACY, 2001, P. 48).

o monitor student comprehension, teach strategies and then observe students as they read. Observe the student in multiple settings with different types of texts. Ask yourself questions about the student's use of the strategy.

### Setting a purpose for reading

- Does the student preview the title and illustrations to determine a purpose for reading?
- Can the student use prior knowledge in combination with previewing of text to determine his or her own purpose for reading?

### Fix-up strategies

- Does the student self-monitor while reading?
- Where did the student encounter the problem?
- Why did the student have difficulty with comprehension?
- Which fix-up strategy did the student use?
- Is the text too difficult for the student to use when learning a comprehension strategy?

### Background knowledge

- Is the student able to activate prior knowledge on a given topic?
- Is the subject familiar or unfamiliar?
- Is the student interested in the topic?
- Is the student able to form questions based on the topic?

### Reading expository text

- Does the student examine the title before reading?
- Does the student examine the headings and subheadings before reading?
- Does the student examine the visual aids before reading? Which visual aids capture the student's attention?
- Does the student examine italicized and boldfaced words before reading?
- Does the student examine the introduction and the conclusion before reading?
- Is the student able to form questions based on the topic?
- Is the student able to confirm new learning based on his or her reading about the topic?

### Comparing and contrasting two different texts

- Can the student identify similarities between two texts?
- Can the student identify differences between two texts?
- How does the student record or report the similarities and differences?
- What does the student notice?
- What level of support did the student need to use the strategy?
